Allowable Subject Matter

1. Claims 1-9 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of Gerhardt et al. (U.S. 5,481,622) provides for acquiring an analog image with camera 12, the eye-tracking system converts the image to a digital pixel representation of the image, determines a pixel intensity threshold and segments the pixel image into dark and light pixel groups, groups segmented pixels of the same intensity into pixel blobs, and selects one of these blobs as corresponding to the user's pupil. Col.9 lines 9-17. Further in Fig.9, provides for a region-growing approach, a current pixel 100 is being examined col.11 line 62-col.12 lines 15. **However the closest prior art of Gerhardt does not provide for rebinning grayscale pixel data associated with the decimated image; reassigning a selected range of gray scales representing a region of interest of the remapped grayscale pixel data to one while zeroing others; labeling the connected pixels associated with the range of gray scales representing the region of interest; joining and extending the connected pixels through region growing using a pre-selected offset value; and filtering segmented regions of the connected pixels to eliminate certain candidates.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
